SkinFlex M

LED system for photodynamic therapy

SkinFlex M is a multifunctional, modern LED therapy system for medical treatment of the skin, e.g., for performing indoor daylight PDT (ADL-PDT). The exposure is virtually painless and highly effective. Individual wavelength spectra with high intensities are available for many other applications.

Highlights

- Virtually painless exposure (daylight spectrum)
- Flexibly adjustable LED panels with metal hinges
- Very large treatment area (approx. 1,000 cm²)
- Individually adjustable exposure times (1 to 120 minutes)

Light spectra required for effective indoor daylight treatment

- Modern touch screen for easy operation
- High-performance LEDs with low heat generation
- Low-noise ventilation system
- Robust and high-quality workmanship
- Multifunctional therapy system
- Controlled and reproducible treatment procedures
- CE-certified medical device (2460)
